KHL

Three Jaw Wedge Bar Chuck with Closed Center

BERG power operated chucks type KHL are designed for high speed, high capacity lathes. They stand out for their high clamping force and precision, a particularly large open centre for bar stock, as well as high maximum rotational speed and low construction height.

Furthermore they can be obtained with serrated or tenon jaws.

The KHL chucks do allow more jaw stroke than the KH series.

For detailed product information, please download the appending PDF - file or request our catalog.
